Track: Engineering and Technology Studies

Introduction

This track is designed to delve into the scope of research and development in the field of Engineering and Technology Studies. It encompasses all processes crucial to improving decision-making, while also exploring research questions that are relevant to a broad audience.

This track extends an invitation for both theoretical and applied research papers addressing topics relevant to the concepts within Engineering and Technology. Its overarching goal is to establish a dedicated platform for the sharing and discussion of such research, thereby emphasizing the comprehensive efforts aimed at enhancing the efficiency and effectiveness of this research domain. In alignment with this year's conference theme, submissions focusing on opportunities to improve decision-making for a diverse set of stakeholders are particularly encouraged.

Topics:

Broadly, the main areas of inquiry include the followings Multidisciplinary areas but not limited to: *Architecture, Artificial Intelligence, Bioinformatics, Bio-medical Engineering, Biotechnology, Computer software and applications, Computing, Data Mining, Design, Energy, Engineering, Forestry, Image Processing, Information Technology, Internet and World Wide Web, Manufacturing, Military, Mining, Nanotechnology and Smart Materials, Networking, Polymers and Plastics, Renewable Energy, Robotics, Space Environment and Aviation Technology, Systems Engineering, Transport, Electrical Engineering, Civil Engineering, Computer Engineering, Architecture Engineering, Mechanical Engineering, Materials Engineering, Chemical Engineering, Architecture Engineering, Built Environment, Aeronautical engineering.*
